

Community Engagement for Academic Research

Are you seeking to enhance your project with qualitative research informed by community engagement? Mapping for Change have extensive expertise in leveraging community engagement to support academic projects across a range of disciplines, along with interdisciplinary projects.

We have provided community engagement services for numerous prestigious interdisciplinary research projects, including those funded under EU Horizon 2020 FP7, along with British Research Councils such as the AHRC, ESRC and EPSRC.

Flexible methodology. Our engagement methodology is flexible and can be tailored to collect whatever data is relevant for your research. Typically, we use paper maps as a way of eliciting dialogue amongst communities, and examining complex spatial questions.

Multiple methods. Our team's highly interdisciplinary academic background means we have experience in a range of social science and other disciplinary research methods when interacting with communities.

Different scales. We have experience working at multiple scales, depending on the level of data required. From a particular housing block, to an entire neighbourhood, our experience means that we can identify and approach communities of any size.

Inclusive. We use a range of on and offline engagement to ensure hard-to-reach individuals are included. For direct engagement, we have experience in eliciting the perspectives of harder to reach or vulnerable individuals and have worked extensively with elderly and disabled people.
